## Case 5:14-cv-05344-BLF Document 152-3 Filed 12/21/15 Page 3 of 23 HIGHLY CONFIDENTIAL - ATTORNEYS' EYES ONLY

1	A Well, the title of the section, it's what	09:53:27
2	you read from page 12, about line 7, "Extensible	
3	Markup Language," and then "XML."	
4	I think that my description of what I	
5	think is the proper construction demonstrates that	09:53:39
6	that is not specific to the W3 standard.	
7	Q Okay. Anywhere else?	
8	A Not that jump out. There might be some,	
9	but I think that that's generally it.	
10	And really, I'm just looking at this	09:54:21
11	particular section, IV, Bl. I don't know if I if	
12	the term is somewhere else in the rest of the	
13	patent sorry the rest of my declaration.	
14	Q Do you use the term "XML" in your	
15	professional life outside the context of this	09:54:40
16	litigation?	
17	A I do.	
18	Q What do you use it to refer to?	
19	A It depends on the context. In some cases	
20	I'm talking about XML as standardized by W3C.	09:54:55
21	I think in other contexts I would use the	
22	term to generally refer to extensible markup	
23	languages, and I think as a good example of that	
24	would be in some instances characterizing some of	
25	the other kinds of XML style languages that are	09:55:18
		Page 25

## Case 5:14-cv-05344-BLF Document 152-3 Filed 12/21/15 Page 4 of 23 HIGHLY CONFIDENTIAL - ATTORNEYS' EYES ONLY

1	shown in the figure from the Sall reference on page	09:55:25
2	13.	
3	Q What do you mean characterizing those	
4	other languages?	
5	A You might say something like SOAP is a	09:55:40
6	type of XML.	
7	Q Okay. And SOAP is actually a protocol	
8	based on the XML that's standardized by the W3C,	
9	correct?	
10	A Is there someplace that you're looking at	09:56:23
11	that characterization?	
12	Q Well, I'm looking at the attachment that	
13	you provided about SOAP. I guess the easiest way to	
14	find it is, if you look at the pagination at the top	
15	of the document, it says "page 145 of 193."	09:56:47
16	Are you at that page?	
17	A I am.	
18	Q This document that you attached to your	
19	declaration was published by the W3C, correct?	
20	A Yes.	09:57:15
21	Q It was published in or around May 2000, at	
22	least according to the top of the document, right?	
23	A The best I can tell you is that's what the	
24	date on the document is.	
25	Q Okay. And if you look at the abstract, it	09:57:30
		Page 26

## Case 5:14-cv-05344-BLF Document 152-3 Filed 12/21/15 Page 5 of 23 HIGHLY CONFIDENTIAL - ATTORNEYS' EYES ONLY

1	A Right. So the date there is supposed to	12:09:45
2	be 2000.	
3	Q Not 200?	
4	A Right.	
		12:09:51
5	Q They're not claiming a priority date of	12.09.51
6	200?	
7	MR. TUNG: No, they're not.	
8	THE WITNESS: That would be quite a	
9	reduction to practice.	
10	And I think Cisco might actually be	12:09:58
11	attempting to argue an earlier priority date. So	
12	I'm not opining on any priority dates in my	
13	declaration, just to be clear.	
14	BY MR. SILBERT:	
15	Q Okay. So looking at page 18, starting at	12:10:11
16	line 19, the claim term that you're opining about	
17	here is "management programs," correct?	
18	A Yes.	
19	Q And Cisco's construction that you agree	
20	with reads, "Separate tools or external agents	12:10:30
21	having their own respective command formats that	
22	provide management functions, " correct?	
23	A Yes.	
24	Q So when the construction says "separate	
25	tools," what are the tools separate from?	12:10:51
		Page 101

## Case 5:14-cv-05344-BLF Document 152-3 Filed 12/21/15 Page 6 of 23 HIGHLY CONFIDENTIAL - ATTORNEYS' EYES ONLY

1	A Well, within the definition or proposed	12:11:36
2	construction itself, it's the idea of it's separate	
3	tools. So the tools are the things that have to be	
4	separate.	
5	I'm sort of looking at what I've cited to	12:11:55
6	in the intrinsic record, and I think there's it	
7	talks about different tools and it talks about sort	
8	of external programs. And so the idea is that you	
9	have separate tools from each other.	
10	I think in paragraph 61, "separate or	12:12:14
11	external" refers to separate or external routines or	
12	programs as distinguished from, say, physically	
13	separate or external computers. So it's talking	
14	about separate or external routines or programs.	
15	Q Right. And I think part of your answer	12:12:37
16	got at my question.	
17	You're saying that the "separate" in that	
18	definition means that the tools are separate from	
19	each other?	
20	A I think that's one example of what of	12:13:04
21	where the separation could come from.	
22	I think it's sort of described in I'd say	
23	the two paragraphs where I talk about that issue in	
24	61 and 62.	
25	Q You say that being separate from each	12:13:34
		Page 102

## Case 5:14-cv-05344-BLF Document 152-3 Filed 12/21/15 Page 7 of 23 HIGHLY CONFIDENTIAL - ATTORNEYS' EYES ONLY

1	other is one example of where the separation could	12:13:35
2	come from.	
3	What else could the tools be separate	
4	from?	
5	A I mean, if there are different routines or	12:13:47
6	programs, there could be separate processes.	
7	Depending on the structure and the way that the	
8	programs are executed, there might be some aspect	
9	that creates some separation there.	
10	I'm not sure I can give you the definitive	12:14:05
11	list of things that would qualify as what would make	
12	something separate, what makes the tools separate.	
13	Then as I describe in paragraph 62, you go	
14	back and you can look at the specification, and it's	
15	characterizing or providing some characteristics of	12:14:24
16	the problems to be solved based on having the	
17	separate programs.	
18	Q How would I know whether two tools are	
19	separate or not?	
20	A I'm not sure I understand the question.	12:14:45
21	Q Well, suppose I have tools that I can use	
22	in my processor-based system, and I want to know	
23	whether they're separate tools or not because, say,	
24	I don't want to practice this patent. What would I	
25	look at to determine whether the tools are separate	12:15:07
		Page 103

## Case 5:14-cv-05344-BLF Document 152-3 Filed 12/21/15 Page 8 of 23 HIGHLY CONFIDENTIAL - ATTORNEYS' EYES ONLY

1	or not separate?	12:15:10
2	A I mean, "separate" means separate. You	
3	could look at a variety of examples, some of which I	
4	just gave.	
5	If there are separate processes, that's an	12:15:20
6	example of where they could be separate; if there	
7	are separate programs. You could think of counter	
8	examples where it's all part of the same function or	
9	it's all part of the same particular program that's	
10	running some piece.	12:15:49
11	I think those are the kinds of things that	
12	you would can look at to determine if you've got	
13	separate tools or external agents.	
14	Q What do you mean by "separate processes"?	
15	Is there some definition that you have in mind when	12:16:04
16	you say that?	
17	A I'm not sure I have a specific definition,	
18	but you can think of say, in Windows, for	
19	example, you can have different programs. I think	
20	different icons on the desktop would potentially be	12:16:20
21	separate programs.	
22	If those are executing as separate	
23	processes, that's something else you could look to	
24	to see that they are separate.	
25	Those are a couple of examples.	12:16:32
		Page 104

## Case 5:14-cv-05344-BLF Document 152-3 Filed 12/21/15 Page 9 of 23 HIGHLY CONFIDENTIAL - ATTORNEYS' EYES ONLY

1	Q Yeah. So you're saying if I have	12:16:35
2	Microsoft Word and Microsoft PowerPoint, those might	
3	be separate, you would consider those separate	
4	tools?	
5	A Yes.	12:16:48
6	Q For example?	
7	A As an example.	
8	Q What if I have different functions that	
9	are part of the operating system? Like, you know,	
10	there's the file management system in Windows I can	12:17:03
11	create and delete and move around files, and	
12	there's I can change my desktop background using	
13	the settings function.	
14	Is there a way to tell whether those are	
15	separate tools or not?	12:17:20
16	A I think there is. You could certainly	
17	look at the source code. There might be documents	
18	that describe the functionality. If there are	
19	separate processes, that's something else you could	
20	potentially look to.	12:17:37
21	I thought maybe a better example would be	
22	that say within the operating system you have a	
23	process that deals with the network time protocol,	
24	and then you have another process that receives	
25	input from the keyboard. You could identify those	12:17:53
		Page 105

## Case 5:14-cv-05344-BLF Document 152-3 Filed 12/21/15 Page 10 of 23 HIGHLY CONFIDENTIAL - ATTORNEYS' EYES ONLY

1	as separate processes or separate tools within the	12:17:56
2	operating system. And Windows has a built-in clock	
3	and calendar and calculator. You could consider	
4	those to be separate tools.	
5	Q Okay. I think I understand where you're	12:18:13
6	coming from. But just to make sure, what is	
7	there some particular thing that indicates whether	
8	two processes are separate processes or may be part	
9	of the same process?	
10	A Again, I could give you some examples.	12:18:32
11	You know, the idea that if you did a	
12	process list, a control-alt-delete, and then looked	
13	at the process list, that might be one example in	
14	Windows of identifying separate processes.	
15	Q Okay. That's an example in the Windows	12:18:55
16	environment, right?	
17	A Yes.	
18	Q And there's no I think I understand,	
19	but just to be clear, there's no particular	
20	definition that you have in mind of what makes one	12:19:04
21	process separate from another process?	
22	A No, I don't think that's true. I think	
23	"separate" means separate. I don't think you have	
24	to define it any more than that. And you could	
25	potentially look at a variety of factors to	12:19:15
		Page 106
		I I

## Case 5:14-cv-05344-BLF Document 152-3 Filed 12/21/15 Page 11 of 23 HIGHLY CONFIDENTIAL - ATTORNEYS' EYES ONLY

1	determine whether something is separate.	12:19:19
2	I don't know that I could use any	
3	different word than what separate is to define that.	
4	I think separate to me is it's clear. It creates	
5	a clear distinction of what has to be separated.	12:19:37
6	The separate tools or external agents is part of the	
7	proposed construction.	
8	Q Okay. Similarly, how does one know	
9	whether an agent is external?	
10	A So there's an example as part of the	12:20:04
11	embodiment in the '526, and I can point that to you.	
12	I only have the '886.	
13	Q Oh, yeah. We can give you the '526	
14	patent.	
15	MR. ROSEN: This has been marked	12:20:19
16	Exhibit 26.	
17	THE WITNESS: I know it's 26. Do you want	
18	to write on there just so you can say you wrote on	
19	there?	
20	MR. SILBERT: Now I can say I wrote on it.	12:20:34
21	MR. TUNG: This is one exhibit that's easy	
22	to remember.	
23	MR. ROSEN: Exactly.	
24	THE WITNESS: So to be clear, Figure 1 is	
25	described as one of the potential embodiments of the	12:21:03
		Page 107

## Case 5:14-cv-05344-BLF Document 152-3 Filed 12/21/15 Page 12 of 23 HIGHLY CONFIDENTIAL - ATTORNEYS' EYES ONLY

1	Do you see that?	13:11:12
2	A I do.	
3	Q Which one of those in your mind is a	
4	generic command?	
5	A I have to see what the specification is	13:11:19
6	describing as to what the table is.	
7	Q Can you tell the answer without reading	
8	the specification?	
9	I mean, if you just look at those two	
10	commands, are you able to tell which one is a	13:11:32
11	generic command?	
12	A Without context, just looking at the	
13	commands by themselves doesn't necessarily tell you	
14	what's generic versus not.	
15	The idea that you have new syntax versus	13:11:52
16	old command line/syntax would suggest that the new	
17	syntax is potentially more of a generic command.	
18	But again, in some instances, it's helpful	
19	to look at the basis for where the new syntax came	
20	from. Maybe, maybe not. But that's	13:12:13
21	understanding the context is potentially	
22	informative, which is why I was looking for that in	
23	the specification.	
24	Q Okay. But is it possible that both of	
25	those commands that I pointed to, "Watch H323	13:12:30
		Page 127

## Case 5:14-cv-05344-BLF Document 152-3 Filed 12/21/15 Page 13 of 23 HIGHLY CONFIDENTIAL - ATTORNEYS' EYES ONLY

1	entries" and "H323 view," could be generic commands?	13:12:33
2	A In what context? Without any other	
3	context, then yes.	
4	Q Right. Okay. So there's no reason that	
5	"H323 view" couldn't itself be a generic command in	13:12:50
6	some context, right?	
7	A Outside of the confines of this example or	
8	this patent, if you just wrote down on a piece of	
9	paper "H323 view," could that be a generic command?	
10	It could be. It depends. It depends on, you know,	13:13:06
11	where it comes from and its relationship and to the	
12	extent it meets the claim language.	
13	Q What about if you go down a little more	
14	towards like the bottom third of the page? The new	
15	syntax is "Set log level ACB warning (off/local)."	13:13:27
16	Do you see that one?	
17	A I do.	
18	Q And then the old command line/syntax that	
19	corresponds to that is "Log level APP warning	
20	[off/local]."	13:13:51
21	Do you see that?	
22	A I do.	
23	Q Does one of those appear to be more	
24	generic to you than the other one?	
25	A It's not a question of appearance so I	13:14:08
		Page 128

## Case 5:14-cv-05344-BLF Document 152-3 Filed 12/21/15 Page 14 of 23 HIGHLY CONFIDENTIAL - ATTORNEYS' EYES ONLY

1	can't really answer the question, again, without	13:14:14
2	context and without understanding without	
3	understanding the context. It's not simply a matter	
4	of appearance.	
5	Q Well, what is it a matter of to know	13:14:30
6	whether or not a command is a generic command?	
7	A Whether or not it provides an abstraction	
8	of the tool-specific command formats and syntax.	
9	Q Okay. So take the example of the one we	
10	just looked at, "Set log level ACB warning	13:14:47
11	(off/local)," which corresponds to "Log level APP	
12	warning [off/local]."	
13	Does one provide an abstraction as far as	
14	you know?	
15	A It potentially could be. Again, I haven't	13:15:05
16	seen or you haven't pointed me to the description in	
17	the appendix as to what this is what this	
18	appendix is describing. So it's basically a little	
19	bit out of context.	
20	Q But didn't you say that for something to	13:15:18
21	be an abstraction, it has to suppress details of the	
22	specific operation?	
23	A No, that's not quite what I said.	
24	Q So how do I know whether or not something	
25	is an abstraction of another command?	13:15:40
		Page 129

## Case 5:14-cv-05344-BLF Document 152-3 Filed 12/21/15 Page 15 of 23 HIGHLY CONFIDENTIAL - ATTORNEYS' EYES ONLY

1	A I'm not sure I can define "abstraction" in	13:15:47
2	any different terms. It's the idea of what an	
3	abstraction is.	
4	Q Is "Watch H323 entries" an abstraction of	
5	"H323 view"?	13:15:59
6	A Again, you have not given me the context	
7	for this particular appendix. So by itself, one way	
8	or the other, without looking at the specification	
9	to see what it's describing with respect to the new	
10	syntax and the old command line and syntax, it's	13:16:18
11	hard to say. Certainly it could be.	
12	Q Looking at the commands themselves, and	
13	with your knowledge as a professor of computer	
14	science who teaches configuration of network	
15	devices, you can't tell whether "Watch H323 entries"	13:16:37
16	is an abstraction of "H323 view"?	
17	A I think divorced from any context, if you	
18	just put those side by side and said is one an	
19	abstraction of another, the answer would be it	
20	depends.	13:16:55
21	Q What does it depend on?	
22	A It depends on the context.	
23	Q What about the context?	
24	A It depends on whether or not it's a	
25	command that provides an abstraction of the	13:17:08
		Page 130

## Case 5:14-cv-05344-BLF Document 152-3 Filed 12/21/15 Page 16 of 23 HIGHLY CONFIDENTIAL - ATTORNEYS' EYES ONLY

1	tool-specific command formats and syntax, enabling a	13:17:10
2	user to issue the command based on the relative	
3	functions as opposed to the specific syntax for a	
4	corresponding tool.	
5	And you would use that construction, or	13:17:21
6	one could attempt to apply Arista's construction,	
7	and then perform the exercise of understanding the	
8	different commands and in what context they're used	
9	to decide whether or not it's a generic command or	
10	not.	13:17:38
11	Q Is there anything more that you can tell	
12	me than you've told me about what I would need to	
13	know to determine whether "Watch H323 entries" is an	
14	abstraction of "H323 view"?	
15	MR. TUNG: Objection. Vague.	13:17:56
16	THE WITNESS: I'm not sure I understand	
17	the question.	
18	BY MR. SILBERT:	
19	Q I just want to understand what I would	
20	need to know in order to determine whether "Watch	13:18:04
21	H323 entries" is an abstraction of "H323 view."	
22	How do I know whether one is an	
23	abstraction of the other or not?	
24	A Well, let me see what the context is for	
25	Appendix A and what it says about Appendix A.	13:18:23
		Page 131

## Case 5:14-cv-05344-BLF Document 152-3 Filed 12/21/15 Page 17 of 23 HIGHLY CONFIDENTIAL - ATTORNEYS' EYES ONLY

1	Q Dr. Almeroth, did you read Appendix A in	13:18:55
2	formulating your opinions about the meaning of the	
3	term "generic command"?	
4	A I did. I just don't have the	
5	specification memorized.	13:19:03
6	So then in column 3 it says, "As	
7	illustrated in part A of the attached appendix, the	
8	new syntax provides a generic instruction set that	
9	provides an abstraction of the tool-specific command	
10	formats and syntax, enabling a user to issue a	13:19:18
11	command based on the relative functions as opposed	
12	to the specific syntax for a corresponding tool."	
13	So in that instance, it's describing that	
14	that's that's what Appendix A is, so in that	
15	instance, I mean, that's part of where Cisco's	13:19:36
16	construction comes from. And if that's what it's	
17	describing that it's doing, then those are generic	
18	commands.	
19	And to the extent you asked the question	
20	about, what are you abstracting out of the "H323	13:19:49
21	view" that you what you're abstracting out to	
22	arrive at the "Watch H323 entries" new syntax, if	
23	you know the "Watch 323 entries" could potentially	
24	be more understandable to a human, it could be a	
25	command syntax that's applicable to other kinds of	13:20:22
		Page 132

## Case 5:14-cv-05344-BLF Document 152-3 Filed 12/21/15 Page 18 of 23 HIGHLY CONFIDENTIAL - ATTORNEYS' EYES ONLY

1	processes that have other command formats to do	13:20:25
2	essentially the same thing.	
3	There's the functional item that's	
4	attributed to the new syntax, "Watch H323	
5	information," and so from that perspective and based	13:20:39
6	on what's described in the specification, you can be	
7	providing an abstraction where the generic command,	
8	the new syntax, is specifically designed so that it	
9	would work across a set of other programs or agents.	
10	Q So the way that you know in this case that	13:20:59
11	"Watch H323 entries" is an abstraction of "H323	
12	view" is that the patent specification says that it	
13	is, correct?	
14	A That's part of it. That provides the	
15	context for understanding what the objective is.	13:21:15
16	And if you look at that objective in light	
17	of what the syntax is and what the functional item	
18	is and what its intention is, I think it is the case	
19	that it's providing an abstraction.	
20	Q Do you need to understand the intention in	13:21:31
21	creating the term to know whether or not it's an	
22	abstraction?	
23	A Not so much the intention of creating the	
24	command, not where it was designed and what was in	
25	the person's head when they created it, but from the	13:21:43
		Page 133

## Case 5:14-cv-05344-BLF Document 152-3 Filed 12/21/15 Page 19 of 23 HIGHLY CONFIDENTIAL - ATTORNEYS' EYES ONLY

perspective of looking at the command and  potentially being able to evaluate whether it's an  abstraction over one or more programs.  Q What do you mean, "from the perspective of  looking at the command and potentially being able to  evaluate" can you tell whether one command is an  abstraction of another by simply looking at the two  commands?  A In some instances yes; in other instances  no.  13:22:24  There's even some instances where if  you look further down, I think one of the examples  that's described actually even some of the ones  that you've described, they have some of the various  same words or attributes that are part of the  command.  In that instance, the abstraction might be  more about having that command structured in that  way so that it's applicable across multiple  programs.  13:23:00  It need not be that way. There are some  examples in the list where it's pretty clear, like  the example I gave in paragraph 67 of my  declaration, where it's pretty clear that the new  syntax is much easier to understand for a person as  13:23:15  Page 134			
abstraction over one or more programs. ## Case 5:14-cv-05344-BLF Document 152-3 Filed 12/21/15 Page 20 of 23 HIGHLY CONFIDENTIAL - ATTORNEYS' EYES ONLY

1	one example of what might make a command a generic	13:23:22
2	command.	
3	Q Okay. So you said that's an example. So	
4	does a command have to be easier to understand for a	
5	person in order to qualify as a generic command?	13:23:38
6	A No, I don't think that's a requirement of	
7	what an abstraction is. I think it's an example.	
8	There's the example that's given in	
9	paragraph 69. Another way of providing an	
10	abstraction is to abstract out some of the	13:23:55
11	particular details.	
12	In some cases it might be the syntax, so	
13	you might have a command that has some additional	
14	spacing to make it more understandable or easier to	
15	parse or more consistent with commands for other	13:24:09
16	management programs.	
17	Any of those might be potential mechanisms	
18	for how an abstraction might be achieved so to make	
19	a command generic.	
20	Q If I presented you with a list of commands	13:24:24
21	as and other commands that they correspond to	
22	similar to the middle and right columns in Appendix	
23	A, could you tell me whether one is an abstraction	
24	of the other?	
25	MR. TUNG: Objection. Incomplete	13:24:43
		Page 135

## Case 5:14-cv-05344-BLF Document 152-3 Filed 12/21/15 Page 21 of 23 HIGHLY CONFIDENTIAL - ATTORNEYS' EYES ONLY

1	hypothetical.	13:24:43
2	THE WITNESS: Maybe. I think it would	
3	depend.	
4	BY MR. SILBERT:	
5	Q If I give you the command "delete"	13:24:50
6	followed by the name of a file, would that be an	
7	abstraction of a command like a UNIX command "RM"	
8	followed by the name of that file?	
9	A It might be.	
10	Q Because it's easier for a human to	13:25:10
11	understand?	
12	A Some people. I haven't spent a lot of	
13	time with UNIX. That could be one of the tests you	
14	could use to establish that there was an	
15	abstraction.	13:25:24
16	Q Is there any definitive way that you know	
17	of to look at a command and determine whether it's	
18	an abstraction of another command?	
19	A Yes. I think you would look at the	
20	information that was available. If it were limited	13:25:47
21	to just a list of commands, that by itself might not	
22	be sufficient.	
23	But again, depending on the commands	
24	you gave the example of delete and RM. It might be	
25	the case if you had an "RM-F" file name and then you	13:26:04
		Page 136

## Case 5:14-cv-05344-BLF Document 152-3 Filed 12/21/15 Page 22 of 23 HIGHLY CONFIDENTIAL - ATTORNEYS' EYES ONLY

1	rename that as "delete," that I think you could	13:26:08
2	consider something that was easier to understand in	
3	an abstraction.	
4	In other instances where the commands look	
5	more similar, you might have to look at additional	13:26:19
6	context or some more information to understand	
7	whether it was an abstraction.	
8	Q Is there any reason looking at the H323	
9	example we were looking at, is there any reason I	
10	couldn't reverse these two commands and have "Watch	13:26:37
11	H323 entries" be the old command line/syntax and	
12	have "H323 view" be the abstraction?	
13	A I think it would depend on context. I	
14	think you could have a system that, in that example,	
15	used "H323 view," and probably maybe put a space in	13:26:59
16	there, H323, space, view. That could potentially be	
17	an abstraction of "Watch H323 entries."	
18	Q Would there have to be a space?	
19	A No, I don't think you have to have a space	
20	in order to establish that there's an abstraction.	13:27:19
21	Q So you could have it exactly as written,	
22	"H323 view," and have that be the generic command,	
23	and "Watch H323 entries" could be the old command	
24	line/syntax?	
25	MR. TUNG: Objection. Incomplete	13:27:35
		Page 137

## Case 5:14-cv-05344-BLF Document 152-3 Filed 12/21/15 Page 23 of 23 HIGHLY CONFIDENTIAL - ATTORNEYS' EYES ONLY

1	hypothetical.	13:27:35
2	THE WITNESS: As long as you were meeting	
3	the requirements of the claim construction.	
4	BY MR. SILBERT:	
5	Q But is there any reason that that example	13:27:41
6	wouldn't meet the requirements of the claim	
7	construction as far as you know?	
8	MR. TUNG: Same objection.	
9	THE WITNESS: Without more information, it	
10	would be hard to say.	13:27:53
11	You haven't said what the requirements	
12	are, how it was derived, any additional piece of	
13	information.	
14	So the best I could do would be to come up	
15	with a tautology that says if it's meeting the claim	13:28:05
16	limitation, it would meet the claim limitation.	
17	And in terms of analyzing that	
18	hypothetical to determine if it meets either of the	
19	parties' proposed claim constructions, I would need	
20	more information.	13:28:20
21	BY MR. SILBERT:	
22	Q Does the term "generic command" by itself	
23	have a meaning to persons of skill in the art	
24	outside the context of this patent?	
25	A It's a fairly broad term. It would likely	13:28:33
		Page 138
